SUMMARY

Software and game developer with hands-on freelancer and independent experience building projects with Unity, C#, and modern development technologies. Started developing games independently 6 years ago and expanded through personal projects, game jams, engineering coursework, and embedded systems. Experience spans game development, 3D/multiplayer systems, and AI-assisted workflows. Comfortable taking projects from concept through implementation and delivery, with a strong focus on understanding how technologies work under the hood.

EDUCATION

Kinneret College of Engineering

Electrical & Computer Engineering (2 Years)

- Coursework covering digital logic, embedded systems, low-level programming, C/C++, and core electrical engineering concepts.
- Completed senior engineering project integrating FPGA, embedded hardware, networking, mobile dev, computer vision, and cloud services.

AI & CREATIVE WORKFLOWS

- **AI Video & Media Creation:** 1 year of experience building AI video clips and generative media using Claude Code, ComfyUI, and customized pipelines.
- **Generative AI & Image Pipelines:** Experience with Stable Diffusion, ComfyUI, prompt engineering, and controlled AI image generation.
- **AI-Assisted Development:** Build AI-assisted workflows using Claude Code, Cursor, ChatGPT, Gemini, and Codex.
- **Automation & Agents:** Experiment with AI agents for software development, workflow optimization, and creative process acceleration.

SKILLS & TECHNOLOGIES

AI & Generative Tools:	Stable Diffusion, ComfyUI, Prompt Engineering, ChatGPT, Gemini, Claude, Claude Code, Cursor, Codex
AI Workflows & Fine-Tuning:	LoRA Training & Fine-Tuning, 2D/3D AI Integration Pipelines, 3D AI Animation Workflows
Game & 3D Development:	Unity, C#, Unity Netcode, Photon, 3D Modeling (Blender), Multiplayer Systems
Software & Scripting:	Python, C, C++, Java, .NET, VHDL, SQL, Git, Linux, Bash
Embedded & Hardware:	ESP32, Arduino, FPGA DE10-Lite, I2C, PWM, RS232, Firebase

PROJECTS & GAME DEVELOPMENT

The Hell Master

Solo Game Jam

- Complete game developed independently in Unity in 6 hours, handling C# programming, art, animation, and level design under tight constraints.

CyberSide

Game Jam (2022)

- Game developed and shipped independently during a 2022 game jam built in Unity, handling programming, art direction, and visual style.

NPC_Mobile

Senior Engineering Project

- WiFi-controlled IoT robot built as a full embedded system, centered around a DE10-Lite FPGA, Android app, ESP32-CAM, and computer vision.

Multiplayer & Networking Prototypes

- Multiple multiplayer prototypes using Unity Netcode and Photon covering client/server communication and state synchronization.
